

US-NPN Timeline Figures

Figure 1: Day of budburst and the day of leaf out for native tree species in New England. Data was downloaded from the US-NPN data download tool (<http://data.usanpn.org/observations/get-started>) and observations were constrained to deciduous broadleaf trees that were observed within 40° to 45° latitude. The standard deviation is represented in coral for budburst and green for leaf out.

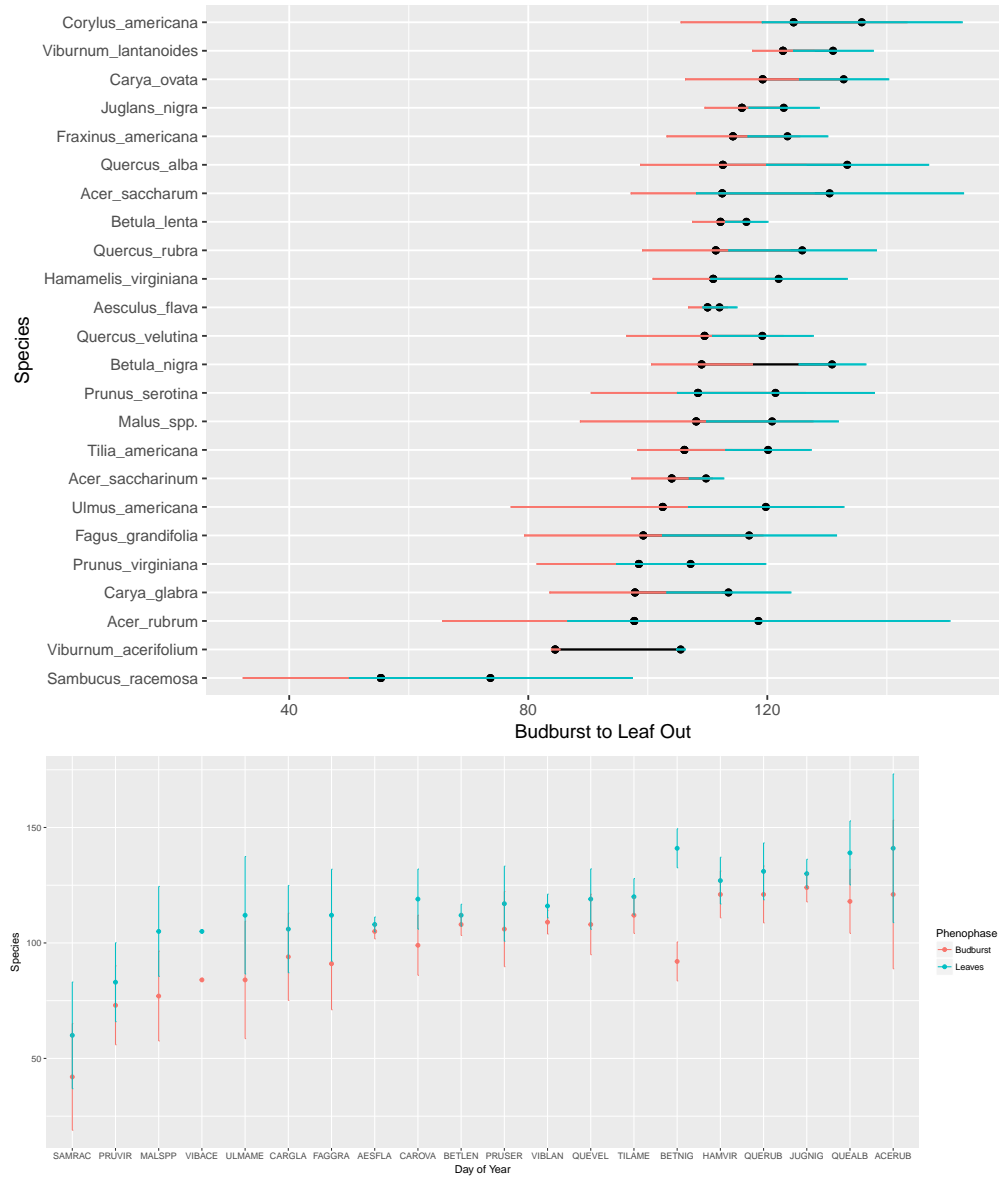

Figure 2: Day of budburst and the day of leaf out for native tree species in New England. Data was downloaded from the US-NPN data download tool (<http://data.usanpn.org/observations/get-started>) and observations were collected from the Arnold Arboretum - Tree Spotters program. The standard deviation is represented in coral for budburst and green for leaf out.
